**SLHS Research Coordinator Earns Certification**

POTSDAM, NY – Clinical Research Coordinator Daniel Jaremczuk, CCRP, recently passed the exam to become a Certified Clinical Research Professional. He is a member of the St. Lawrence Health System Clinical and Rural Health Research Department’s team.

The credentialing is earned through the Society of Clinical Research Associates’ International Certification Program. Through the program, Mr. Jaremczuk was evaluated on his knowledge as a clinical research professional, and his understanding, knowledge, and application of the conduct of clinical investigations in accordance with national regulations.

“We are extremely proud of Dan’s achievement in receiving his certification,” noted Clinical Research Manager Carly Lovelett, CCRP. “Earning his CCRP credentialing is not only a benefit for Dan, but also for our department, as it demonstrates our commitment to quality standards.”

The Clinical Research Department offers a number of different Clinical Trials, and looks to area residents to become involved in them through program advocacy, volunteer support, or participation as a patient. Most recently, the department was selected to take part in the Operation Warp Speed COVID-19 clinical trials involving outpatients who are currently infected with the virus.

Other on-going clinical trials involve rheumatology, and pulmonology. The Clinical Research Department also provides free educational webinars to the public, and after the holidays will continue with its sessions on COVID-19 Public Information.

For information on becoming involved in a clinical trial, and everything the Clinical Research team is currently involved with, visit <https://www.stlawrencehealthsystem.org/services/clinical-research>.
